

Austrian Gaming Industries´ NOVO Unity™ conquers Germany

The new casino Erfurt is the first to operate a combination of AGI´s most popular multi-player systems. Both Novo TouchBet® Live-Roulette and Novo Multi-Roulette™ are linked to one system the first time ever and are already proving to be very successful.

The new casino from Germanys Westspielgruppe is located in Erfurts 5-star Hotel am Dom, and leaves nothing to be desired in both comfort and elegant atmosphere. The central focus of the Casino is the large slot room. Besides it´s 90 slot machines, the main attraction is the unique combination of AGI´s multi-player systems. 13 participants can try their luck on the two systems, comfortably selectable on their TouchBet® terminals.

Jens Halle, Managing Director AGI: *“Our electronic roulette systems have quickly conquered the markets and brought new players to the game – players who may have been intimidated to learn the live game. On the terminal you cannot do something wrong and, in addition to this, you have more privacy. Plus, it is very flexible for the operator. Those are the reasons why the system has become so popular shortly after its*

introduction and we are very proud about the installation of this unique multi-player combination in Erfurt."

Regarding to Frank Ziegler, Director of Business Development, the acceptance of the new multi-player systems has been overwhelming:" The trend is clearly going from live games to slot machines in Germany. NOVO Unity™ is the perfect system to react fast and flexible to casino guests' preferences. The new roulette systems have brought very good returns."

While the server-linked Novo TouchBet® Live-Roulette is connected to a classic live Roulette wheel, the Novo Multi-Roulette™ operates with a fully automated wheel.

The whole gaming process, starting with placed bets, air density spins and results, are displayed in real time on high resolution plasma screens, as well as on each of the linked TouchBet® terminals. This makes an automated Roulette game as attractive as a live game. The individual placement of the TouchBet® -Terminals gives operators the chance for casino floor space optimisation and to offer the game to a much wider audience.

The server based NOVO Unity™ platform was designed for AGI's multi-player family and offers casino guests the possibility to choose between three different Roulette tables. Casinos have the choice to operate any combination of Novo Multi-Roulette™, Novo TouchBet® Live-Roulette and Novo Flying Roulette™. This makes NOVO Unity™ the most flexible system for casino operators.
