

Access-IS registers with NOVOMATIC

Reading, UK – 23 June, 2020: Access-IS, the leading supplier of Identity Document readers is pleased to announce the integration of its ATOM® document reader with NOVOMATIC's myACP casino management system. The modular myACP system, combined with the Access-IS Atom, can be adapted to meet the requirements of any casino operator and helps to ensure compliance with most international gaming regulations and legislation.

The myACP system covers the requirements of a member's entrance. It processes the registration of player data in a quick and easy way: issuance of member card, optional ticket vouchers for entrance/activities within the casino, member categorisation and a powerful attendance report. With every customer touch point, simplicity and usability are key and it is here that ATOM really delivers. Simply by placing their ID document on ATOM's glass, it is imaged in multiple light sources with the printed data and chip information retrieved and passed through to myACP; all of this while the ID document never leaves its owner's hand.

The ATOMs, supplied through Ineltro in Austria, automatically capture images of identity documents in multiple light wavelengths and simultaneously extract personal data from the MRZ using OCR. The high-resolution colour, infra-red and ultraviolet images are used by electronic identity document

validation technology to instantly check the document's authenticity. NFC capability allows the device's API to access the RFID chips of e-passports & eID cards to provide digital personal data, biometric image and perform basic security checks on the document. The ATOMs were supplied with Access-IS' innovative expansion dock which adds contact card reading and Magnetic Stripe Reading (MSR) for accessing the information held on the members players card.

ATOM® document reader with expansion dock

myACP is a modular casino management system that can be adapted to meet the requirements of casino operators as well as meeting most international gaming regulations. The flexible system is suitable for small arcades as well as large casino operations. Thanks to its innovative and user-friendly design, almost 1,200 gaming locations in more than 25 countries already trust this powerful tool. It runs on a highly protected Internet connection based on secure firewall and encryption, uses a highly secure data transfer protocol, provides a full information back-up of the database and offers the possibility of automated storage.

Speaking about the integration, Alexander Saam, NOVOMATIC Casino Management Information Systems, said, "We were looking for a reliable ID reader that also allows us to read the MSR and Chip data of our player cards; the ATOM satisfied both of these requirements in a small and stylish package".

h4. About Access-IS

Access-IS is at the forefront of the development of innovative electronic systems specialising in image processing, RFID/NFC technology, barcode reading and specialist keyboards. Access-IS are dedicated to manufacturing products designed to accurately capture and transfer information into electronic systems.

Operating in over 72 countries around the globe in three highly specialised verticals; Airline/Airport, ID & Security and Transport Ticketing. In addition to our specialist custom keyboards, which are now the 'de-facto' standard for some of the largest banks, airlines and retailers in the world, the product range includes boarding gate readers, a wide range of document readers for ID document capture and scanning and ticket readers for ground transport and access control.

Access-IS ID & Security products are designed to read e-Passport, e-ID and e-DL for governmental and commercial applications. From the world's smallest OEM OCR reader to our advanced full-page passport reader, we have a product for every application; Border control, Immigration, Document Issuance, Law Enforcement, Banking, Retail, Data Capture, KYC or Anti-Money Laundering and Age Verification.

Accredited to ISO9001:2015 and with a track record stretching back 30 years, Access-IS continues to guarantee the highest standards of design and quality with its dedicated Research and Development team based in the UK and the vast majority of its products manufactured in the UK with only the highest quality materials and techniques.
